FOCUSED PROFESSIONAL REVIEW / 1 OF 2

Crescendo: model-specific evidence.

Read pain research and Crescendo 2 research as different questions.

01 / Crescendo / Conference abstract / 2022

Multicenter study on women with genito-pelvic pain

Uncontrolled pilot | 21 recruited; 11 completed · 12 weeks

Mean FSFI pain-domain score increased from 0.40 to 2.32 among the 11 completers. Higher FSFI pain-domain scores indicate less pain; this is a score change, not a fivefold reduction in pain.

Uncontrolled preliminary analysis with substantial attrition. Results are not a fivefold reduction in pain.

Journal of Sexual Medicine 19, Supplement 1

Read source publication

For the clinical discussion

The pain study used Crescendo. It cannot be presented as an isolated Crescendo 2 treatment effect. In the pain domain of the FSFI, a higher score means less pain; the reported score ratio is not a fivefold reduction in pain.

Educational research summary, not a treatment protocol or an additional product indication. Review the full source, exact model instructions and individual suitability. This review edition requires clinical approval before wider distribution.

FOCUSED PROFESSIONAL REVIEW / 2 OF 2

Evidence, with the right context.

03 / Crescendo 2 / Conference abstract / 2024

A vibrating device in the management of female situational anorgasmia

Uncontrolled case series | 19 participants · 6 and 12 weeks

Mean FSFI orgasm score increased from 1.62 to 3.47 at six weeks and 3.43 at twelve weeks. The abstract reports 90.47% orgasm achievement during intercourse at study end; the denominator is unclear.

Small uncontrolled series. The abstract's reported success percentage has an unclear denominator.
